

Applicant	:	Phillip Liu, et al.
Appl. No.	:	10/606,451
Examiner	:	Krisna Lim
Docket No.	:	16440.4021

Amendment to the Specification

Please amend paragraph [0007] on page 2 to the following:

Various systems and services are now being offered to allow two or more users to participate in an on-line, collaborative meeting, in which the users may share and collectively review or edit applications, files, documents, images, etc., in real time. Video may be available or supported for these meetings. One such service is provided by WebEx Communications, Inc. of San Jose, CA. Collaborative computing, and various systems and methods for same, is described in more detail, for example, in U.S. Patent Application Serial No. 09/751,548, entitled "Scalable Distributed System For Collaborative Computing," filed on December 29, 2000, the entirety of which is hereby incorporated by reference. Typically, the on-line meeting are initiated through one or more web sites (e.g., co-branded with a company) and users are invited to join via email. After joining such an on-line meeting using a web browser of their personal computers (PCs), the users typically dial into a conference call for reliable audio.
